The first graphical user interface to accompany AutoCAD was released in 1987. A Windows-based application, Graphics User Interface (GUI) was followed by Native Graphics Interface (NGI) in 1989. In 1991, AutoCAD was ported to OS/2 and in 1994, Windows was included. AutoCAD 2000 and AutoCAD LT were introduced in 1999, and AutoCAD and AutoCAD LT were enhanced and renamed AutoCAD R15 and AutoCAD LT R13 in 2002. AutoCAD 2016 and AutoCAD LT 2016 followed in 2016. AutoCAD LT 2018 was introduced in 2018. AutoCAD and AutoCAD LT are available as cloud-based, subscription-based apps. Multiple AutoCAD models exist for various types of users and purposes. CAD software designers, modelers and users use two-dimensional (2D) and three-dimensional (3D) models to create, share and analyze ideas. AutoCAD, for example, is used by engineers and architects to design and visualize products, construct buildings and bridges, and create maps and models. The software is also used to display statistical

information about land use, which can be used for urban planning and management. Prehistory In November 1977, at the request of a visiting CalTech professor, Norman Boden developed a prototype electronic system for plotting on a computer, capable of displaying lines, shapes, and other graphical information. This was then incorporated into what is now known as the Architecture Machine Shop (AMS) of the Computer Graphics Laboratory (CGL) at the California Institute of Technology (Caltech) as a research tool for the development of a computer-based drafting system. By March 1978, the system became a permanent part of the CGL and was renamed the Architecture Machine Shop (AMS) Graphics System. The AMS Graphics System was the first graphical user interface to run CAD. A 2.5-inch floppy disk drive was included, allowing people to transfer files to and from a 3.5-inch diskette drive. An 11.5-inch CRT monitor was included with a CAD program loaded into it for viewing. A typical set-up cost $45,000. Later, in 1983, the AMS Graphics System was transferred to Kynetix, Inc. of Beaverton, Oregon. A year later, in 1984, Kynetix released Graphic Dimensions, the first commercial CAD program with a 2D GUI. To

I was lucky enough to witness the (in)famous FilmHook case, and after watching the footage, I could see the appeal of the new location shots for this film. The great mountain in the background and the way it's integrated into the camera angle gives it a lot of dimension and really helps to tell this story, and there's just so much more potential with this approach. It's really exciting to think about the future of how we can use location and embrace it more, but for now I'd say that this is my favourite, it really has a special feel. Final Thoughts The World We Make is a nice little documentary that highlights the work of BAFTA award nominated director Danfung Dennis, and explores the process of making a film from script to edit. As I've been playing it a lot recently, I've become a lot more aware of how quickly a film can be finished and how a budget can be stretched. Filmmaking has always been a labour of love for me, but as I've been shooting more, I've realised that the emphasis has to be placed on the love more than ever before. It's a tough industry and, for the most part, we are in it for the passion and the love of making films. That's not to say that it's easy to survive as a filmmaker, especially in the competitive industry we are in, and I think we'll all admit to having a lot of ups and downs. The questions at the end were a good example of this, it's a simple question that many might have felt was a clichéd one but it's still a good way of getting to the bottom of the filmmaking process. If you've been following my writing, you'll know that I love learning about new filmmaking techniques, whether that's through reading or watching a film. I've always looked at film to be one of the most unique art forms and that's something that I'm very passionate about. It really is up to the filmmaker to tell their story and express themselves in a

Hookups are now created in Ortho view, as well as in isometric view and other supported views. You can drag and drop Ortho view hookups to other parts of the drawing. Indoor scenes: New geographic heights and scenic heights for a more accurate modeling of buildings and urban environments. Replace duplicate vertices in a model or in the scene with one or more common edges, resulting in a more accurate and less cluttered model. Changes to User Interface (UI): A new search box in the UI allows you to quickly search for any feature in the drawing. The pop-up menu in the task bar offers new context-sensitive options, such as selecting and exporting only the active layer. Automatic layer options: Extend profiles to all open drawing layers. Create shape profiles from all open drawing layers. New tools: Add mass modifiers. Add a bevel on mass modifiers to create four types of mass modifier (curved, flat, exploded and solid). You can now add an edge or a face to a mass modifier. Modify a solid angle in the Solid Angle feature to create an infinite solid. Architectural Bridge component: Support for complex connector models and solid angle analysis. Split and connect sections with complex connectors. Animate the connector model and snap the spliced parts. Create additional components in the connector model. Share View: You can share your drawing or any annotations made in it. You can also share the drawing from a session file, including the command history. Native command view: Record and play back actions or in-place command sequences. Annotate a command sequence in the command window with the tool bar and redo the command later. New and improved rendering: Auto-updating of world view camera. Compatible with highly detailed and realistic textures. Copy and paste: You can copy the actual content of an annotation or some other graphic on the drawing to another drawing. Cut and paste annotations from one drawing to another drawing. CATIA's BIM support: Import/export models from/to CATIA's BIM. You can export
