CorelDraw Graphics Suite X6 16.4.0.1280 SP4 (64 bit) [Chin.The functional assessment of T1/T2 noncontrast imaging in magnetic resonance imaging. The functional assessment of T1/T2 noncontrast imaging has recently been advocated by various authors as an approach to generate functional magnetic resonance (MR) images. We analyzed the increase of activity in the image by using, in the context of a saturation-recovery (SR) technique, (a) asynergic movements (blinking, swallowing, or motor activities), and (b) muscle contraction resulting from neural stimuli delivered by T1-w spin-echoes. The enhancement of image intensity was compared with that of blood flow (as evaluated by functional MR imaging) in normal muscle and in a hyperemic tumor during a muscle exercise using a specific protocol of SR imaging. The increase in activity (1) was as strong in normal muscle as in a hyperemic lesion, and (2) was comparable with blood flow in both cases. The functional approach to obtain T1/T2 noncontrast images shows promise but needs more attention to minimize possible artifacts resulting from specific protocols./* * Generated by class-dump 3.3.4 (64 bit). * * class-dump is Copyright (C) 1997-1998, 2000-2001, 2004-2011 by Steve Nygard. */ #import @interface NSMutableData : NSObject { } + (id)dataWithContentsOfFile:(id)arg1; + (id)dataWithContentsOfURL:(id)arg1; + (id)dataWithBytes:(void *)arg1 length:(unsigned int)arg2; + (id)dataWithBytesNoCopy:(void *)arg1 length:(unsigned int)arg2; + (id)dataNoCopyWithBytes:(void *)arg1 length:(unsigned int)arg2; + (id)dataWithBytes:(void *)arg1 length:(unsigned int)arg2 options:(unsigned int)arg3; + (id)dataWithBytesNoCopy:(void *)arg1 length:(unsigned int)arg2 options:(unsigned int)arg3; + (id)dataWithBytesNoCopy:(void *)arg1 length:(unsigned int e79caf774b
