The Elden Ring is a fantasy action RPG where the players fight to win battles, and achieve the goals of the story with the aid of a powerful warlock. By acquiring players' in-game money, the player can solve the warlocks' mysterious problem and fight against the underworld. In addition to the in-game currency, the players can earn rare items such as golden weapons, legendary artifacts, and magic abilities for rare monsters by completing game quests, which are the main aspect of the game. During battle, you can see a detailed action screen. In order to fight efficiently, you will need to have suitable equipment equipped. Depending on the ability equipped, you can search for the optimal weapon to fulfill your personal play style, or equip magic to deal massive damage. You can equip one item from among the weapon, equipment, and equipment items. You can freely customize the appearance of your character by enhancing the appearance of your weapon and armor. Also, by learning various skills such as stamina, strength, or intelligence, the game keeps you from breaking. On the bottom screen of your smartphone, you can see the current stage. On the map, you can see the paths of other players, who are moving towards the end point. If you are not alone, the names of the other characters present in the game may also appear. Most quests are related to the main story, which can be played in any order. Additionally, there are lots of other missions that serve as side-quests. By clearing the main story and side-quests, you will be able to open a new path, allowing you to play the game more freely. The map consists of a two-dimensional plan, where you can travel freely in the world. Occasionally, you will see a branch and a flagpole on the left and right, which may lead to new areas. If you run out of stamina and fall to the ground, the battle stops automatically, and you can continue playing from the point where you paused. If the stamina continues to reduce even after resting, you will be unable to play for a few minutes. In the event of low stamina, you can slow down the game manually by pressing the left button to stop and press the right button to continue. If you'd like to read more, here's a link to my other blog. No I hope not, but I'm still learning and practicing

writing. I've learned "lesson 16", which is having a written goal. It's easier than you might think. I mean, you've written it, and you're a writer, you should know. Tip: The Exclamation Point The exclamation point is your friend, he's a little devil on your shoulder you're not allowed to forget. It's the easiest punctuation mark, it's just one period. He encourages that goofy look in your face and the words come out. Wait a second… I thought humor was supposed to be a bad thing?? Typical! You just remembered I wrote about a good time to use an exclamation point. No use beating around the bush. I'm fairly certain I mentioned this, a long time ago, but I've had this error when writing. After a while, it stops sounding like me and it makes me sound like a less sophisticated version of Calvin Klein. Confused? I tend to like to "read" my own writing, every time I come back to it, I tell you more than 20 times. If it doesn't make sense, it makes me not like it. But I'm not looking for respect or compliments. I

It's common in several women and men with a normal body to have body hair less than 100 hair of thickness. "Somewhere zero" with blue eyes and luminous skin, characteristic of a pale face, can undoubtedly look exotic, attracting the attention of the other people but a few furred, vertebrated creatures can't. If not careful, you can find yourself planning your vacation to a distant land in the eternal search for a pleasant landing for your hairs. At least that is not even hair. Tails help do not allow us to snooze for long: in most cases, the tails are more than 100 cm long. Several species of domestic animal have originally evolved to be a camel or a goat, and different species have evolved a tail in the course of evolution. The typical tail of the species reptile is reach the length of 1 m and transport water when swimming. Typically they are shorter or longer, but often have a thick and hard skin.

Originated in Asia, the Japanese soft-tailed gecko, geziki, is now recognized the whole world. The first evidence of presence of this species dates from 20000 BC, and according to the literature there are now estimated to be around 170 genera and more than 240 species. True to its name, this animal belongs to the family of geckos and have semipseate auriform feet, with four toes and three in toes. The pelagic are tiger red or black, while yellow spots known as diamond. Most commonly they are less than 1 cm in length and about 0.4 cm in width.

Field of the Invention The present invention relates to a zoom lens used in an image pickup apparatus such as a digital camera. 2. Description of the Related Art A digital

camera (still digital camera) has become mainstream in place of a silver-salt camera (35 mm film camera) in these years. While the digital camera is also widely used for recording a so-called personal image, it has been realized to a large extent that the digital camera is capable of storing pictures electronically even with the use of a memory card on which the recorded images are copied or the like, and so forth. For such a digital camera, various imaging lenses for forming an optical image on a solid-state image pickup device have been used as an image pickup optical system. As the main point of realizing size reduction, an imaging lens with five lens groups or more is often used. For example, the imaging lens with five lens groups includes, from the object side, a first lens group with positive refractive power, a second lens group with negative refractive power, a third lens group with positive refractive power, a fourth lens group with positive refractive power, and a fifth lens group with positive refractive power, arranged from the object side, and configured to perform variation of magnification and focusing by varying the distances from the first to the fourth lens groups to the object to change the optical image formed by the imaging lens. The above imaging lens is designed to converge light fluxes emitted from many light source points in a wide range. Therefore, in the above-mentioned configuration in which the distances from the first to the fourth lens groups are changed to change the optical image, a large space is required for changing the distance from the first lens group to the object, and this leads to increase of the overall size of the imaging lens. There
