Since its introduction, AutoCAD has been continually enhanced, and it remains popular among CAD professionals and CAD hobbyists. History The history of AutoCAD is complex, but AutoCAD was first developed by a small team of engineers at Los Angeles-based Autodesk, Inc., founded in 1945 by Cal Masel. The company's first products were drafting and mechanical software. In 1969, Autodesk purchased Osborn Engineering, a company that specialized in drafting and manufacturing software for industrial customers, including tooling, fabrication, and packaging. Autodesk purchased ORTHO Technology, a provider of paper-based technical drafting software, in 1978, and again in 1981, purchasing companion products, such as ORTHO Design. In 1981, Autodesk, Inc., was renamed AutoCAD, Inc. In 1985, Autodesk hired the best of their in-house software development talent to create the company's first desktop software, which was designed specifically for commercial end users. In the early 1980s, Autodesk moved its headquarters from Los Angeles to a suburb of San Francisco, and expanded its staff from a few dozen to over 100 employees. The company also changed its focus from engineering software to providing CAD (computer-aided design) software to end users. Autodesk was one of the first software companies to be established in Silicon Valley in the mid-1970s, in response to the rapid rise of microcomputers. In July 1982, Autodesk released its first desktop CAD application, AutoCAD, which was designed for personal computers running DOS, or the predecessor of MS-DOS. The first AutoCAD released was a package of standard drawing commands for the Apple II and IBM PC; the first "extended" version, Professional, was released in September 1983. In January 1984, Autodesk released the first version of AutoCAD for Apple Macintosh computers, and the company continued to release new versions for other operating systems (OS) for Macintosh computers, Microsoft Windows and DOS computers, and Unix, though the older DOS and Windows versions still remain popular. OS X versions of AutoCAD for Mac computers have also been released. In August 1984, Autodesk released the first version of AutoCAD for IBM OS/2, and it was a runaway success. The first version of AutoCAD for Windows was released in April 1985, followed by AutoCAD for Windows 3.0 in December 1985. Auto

2D drawing tools The most common 2D drawing tools are included in Autodesk Drawing and Markup, and can be used from within the application. Model libraries Autodesk Architectural Desktop is a collection of architectural modeling and drafting tools. The Architecture library includes: Commercial libraries With AutoCAD's 2009 release of AutoCAD LT, an architectural drawing package was created. AutoCAD LT, Architectural Desktop Edition (ADE), is a free, web-based and cloud-based architectural and engineering software application designed for small- and medium-sized businesses. The software is based on an architectural rendering and visualization solution named RenderFlow. Autodesk Flow is an architectural and engineering software application developed by Autodesk for creating building information modeling (BIM) files. Flow, initially released in 2014 as Autodesk Design Review, is a web-based collaboration application designed for contractors, developers, and other designers that allow architects and engineers to easily review each others' building design ideas. Flow does not require a subscription or license. The design is first created in one of the applications – Design Review, Experience Design Review, Project Review, or Experience Design Review (XDR). The designer makes their design in a particular application, and uploads the file as a DWG, while uploading the built drawings to Flow in a different format, such as PDF. Autodesk Architectural Desktop allows the user to create and design 3D building models using the 3D representation of the structure and its components. One of the component types is the "fabric", which can be attached to the walls and roofs of the model. The user can also create "interior spaces" within the building and transfer these to a Revit project. With the release of 2014, Autodesk Flow was discontinued and the tools for architectural drawing can now be found in Autodesk Project Navigator 2014. Former Prime Minister Atal Bihari Vajpayee on Thursday alleged that the Srikant Verma committee set up to look into the "Vyapam scam" had been formed with a preconceived notion that there was no corruption in the BJP. "The Srikant Verma Committee was set up to identify political leaders who have been tainted by the Vyapam scam, but it has made a second victim of all those leaders who do not have anything to do with Vyapam," Vajpayee said in his blog. "The committee has, in fact, made a second victim of the Prime Minister, the Home Minister, the Cabinet colleagues who have nothing to do with Vyapam," Vajpayee wrote in the blog titled 'How Vyapam got defeated'. "How can the former Prime Minister, who was a witness in the case and a victim of political and financial manipulations, come to the conclusion that there is no corruption in BJP?" he said. In a first, the Srikant Verma Committee report, which found fault with several officials, including bureaucrats in the Home Ministry, the Department of Personnel and Training (DoPT) and the Sports Authority of India (SAI), will be considered by the ministry of external affairs and the CBI and both houses of Parliament. The committee, which has been formed in the wake of an expose by the CBI on scam in the Vyapam recruitment, will submit its findings in a fortnight. The BJP president will forward the report to both the Prime Minister and the Union home minister for their observations, sources said. Vajpayee had helped launch the probe on the Vyapam scam in 2012 after media reports about irregularities in the recruitment of officials at the Sports Authority of India (SAI). The BJP leader had been a witness in the case during a probe ordered by former home minister P Chidambaram who was then in power. ? The Indian Express is now on Telegram.
