There are two main views in AutoCAD: 2D drawing and 3D modeling. The 2D view is a familiar “paper” view in which the viewports are essentially paper sheets. To create a 2D drawing, draw lines, and to attach or “place” 2D objects, AutoCAD uses standard 2D drafting techniques. 3D modeling, on the other hand, is a more complex task. It requires that the user study and understand the 3D nature of objects, their shadows, surfaces, surfaces in various lighting conditions, textures, and so on. This is the reason why AutoCAD offers some basic 2D drawing techniques that can be used to draw freehand but does not offer a true 2D drawing tool. Like in many software applications, most users of AutoCAD need to first create a basic 2D drawing using a 2D drawing tool like Word, Excel or PowerPoint and then transfer the drawing to AutoCAD. AutoCAD has two types of 2D drawing tools: base drawing tools and top drawing tools. Base Drawing Tools Base drawing tools are general purpose tools used to create a drawing or model (2D or 3D) in AutoCAD. Most base drawing tools are available only in the AutoCAD Desktop application and not in the mobile or web apps. In the Desktop application, the base drawing tools are available in the following categories: Align and orient Drafting tools Layout tools Reference tools Viewing and presentation tools Align and Orient This section contains a set of basic 2D drafting tools for creating a 2D drawing, including line, arc, polyline and freehand. These tools operate on 2D drawings in the 2D view only. Line tools The line tool is available to create straight lines, circular arcs, arcs of constant radius, and ellipses. You can change the length of the line, select its color, or select the line type such as solid or dashed. The radius and length of the line can be specified in degrees, minutes, and seconds. Line types are also available: 3-Point, 4-Point, 5-Point, 7-Point, 3-Sector, 4-Sector, 5-Sector, 7-Sector, and 9-Sector. Align and Orient The align and orient tool is used to specify

The software is popular in the fields of architecture, construction, the automotive, aerospace, electrical, electronics, chemical, information technology, manufacturing and mechanical design. Compatibility AutoCAD has a sister software in the form of AutoCAD LT. In the United States and Canada, the AutoCAD LT package is bundled with AutoCAD (though the two have different numbering systems). AutoCAD LT was first released in 1997. Unlike the more feature-rich CAD system, its design and layout features are the same as AutoCAD 2004 except that it is a free upgrade for AutoCAD users for a limited time from 2004 to 2007. When AutoCAD LT was released in 1999, it was sold as a separate package and was also limited to people who had an existing AutoCAD subscription. AutoCAD LT was discontinued in 2007, and AutoCAD was upgraded to version 15. Acquisition by Autodesk In 2011, Autodesk, the company that also owned the former John Deere (now Ag Software) and Autodesk Media & Entertainment divisions, acquired a 50.1% stake in the CAD software company Autodesk, Inc. In exchange, Autodesk bought out the remaining shares of privately held investment firm New Enterprise Associates, which owned 38.3% of the company. In March 2012, Autodesk bought the remaining shares of N.E.A. for \$179.4 million. After the acquisition, Autodesk's CEO, Carl Bass, said that Autodesk planned to move the business to the San Francisco Bay area, although the company would continue to have an office in Chesterfield, Missouri. In September 2012, Autodesk announced a \$2.3 billion acquisition of Onshape, a software maker that creates software for the creation, rendering, and management of 3D models, and the former AutoCAD developer Claris. The products, dubbed "Autodesk Revit Architecture", "Autodesk Revit Structure", and "Autodesk Revit MEP", are bundled together in the Fusion 360 product. In August 2018, Autodesk announced that the company would discontinue the AutoCAD brand. In December 2019, AutoCAD 365 was announced. In November 2019, Autodesk entered an agreement with Google to sell AutoCAD for the first time, for the estimated amount of \$50 million. Formats AutoCAD is capable ca3bfb1094
