for a simple password, i recommend using a name of someone you like or a phrase that you like, or something that you like. the password should also contain numbers and special characters, depending on how they provide the best security. so for example, you can use: john, name of your favorite movie, 123, name of your favorite book, name of your favorite band, name of your favorite song, name of your favorite singer, name of your favorite football team, name of your favorite star wars character, name of your favorite football team, name of your favorite food, etc. if youre the kind of person who has to have a password that starts with the same character four times in a row, theres a good chance that its not a particularly good password. your best bet is to make your passwords easy to remember, but difficult to guess. this means using a mix of letters, numbers, and symbols. we are proud to introduce our new applock application. this application is a simple password manager to be used in conjunction with the password generator on this page. you can create unlimited strong and secure passwords to save them in one place. the undisputed version 2.0.2 is available for pc, xbox 360, and playstation 3 (psp). its the latest version of the undisputed pc game. its easier to use than the 1.2. the undisputed 2.2 game version is released along with the undisputed 2.2 pc game download for \$9.99 at first, what are the factors for selecting the right password? we recommend using a combination of numbers, letters, and special characters, but don't use the same combination as your user name. use letters, numbers, and symbols, although be aware that the longer the password, the more difficult it is to remember. don't use dictionary words or phrases. avoid the use of your name, birth date, or mother's maiden name. password is a common word that includes numbers, letters and symbols. but the password must be easy to remember and difficult to guess.
