Can't seem to get transparent PNGs to work in PDFs. I'm trying to reduce the overall file size of a set of graphics so that when I send them as an email attachment PDF, their size is smaller. I've tried setting different formats to override the defaults, adding dither, using the best compression I can manage, using multiple layers but still I end up with the PDF being huge and not smaller than a print. Any ideas? When I convert an editor's edition to final edition, is it possible to have an online review in pdf editor (something must be visible…)?

If yes, how can I submit data directly in an editor's edition (without going to "preview")?

If no, is it possible to automatically publish the pdf to a website or a directory once I save it? Sadly, this update seems to be a mere iteration of an older version at minimum. It destroys my workflow by default and doesn't let me go into discovery! This is just a huge regression!

I don't even recognize the file creations, the naming, positioning of layers, etc… can we backdoors already? Please!

I said that before and said that in hopes that someone would do something. But, there's nothing! Nothing. Nothing at all. I suggest and to the entire Classic team that this is all you're going to do. Just deliver superior products for us to then choose to pay for the upgrade! The designer and programmer are not always the same. PS is for designers who hate working with computers and amateur programmers. I do both! But the designer in me is condemning this program. It's not okay to make a multi-million dollar program that can't do anything.
