Photoshop CC has been around for a year and there is no sign of it slowing down, even with the additions of new tools that I have not seen in other apps yet. Load times of mere seconds and easy to view photo previews are two more reasons why I love it. With this latest update, you have even more tools than ever before. And if I do say so myself, I even like how well the new flicker free animation tools works. Oh, I did miss the History Tool though. I love how Canon enhance lightroom with the lens fine tune option. It sound like a major shift. This will definitely bring more people to use canon cameras. I observed that in this review your using lightroom 4 Lightroom and Photoshop are two great tools used together for editing a photo - which is ultimately how they started - but good lightroom is best feature.. people enjoying lightroom, they are using the filter function in lightroom.. but most artist, they are using photoshop.. in my opinion, lightroom make the image worse.. when someone makes big changes like skylight in photoshop.. and using bridge to upload to lightroom.. it can be scary for artist. One of the best things in Lightroom 4 (LE) is the Histogram View. There is a whole menu filled with different types of histograms such as Black and White histogram (for grayscale images), Profile histogram, RGB histogram, etc. The histogram view can also be displayed in RGB or CMYK. Photoshop is a product by a company called Adobe. Hence its a fact that it is highly reliable and can open all the formats. However, there are different options to loose display of your images. For casual users this feature is convenient, but for a professional user it can be an issue as they need to constantly monitor their images. My guess is that one of these options will be removed in a future version of the program.
