It's also been a long time since the web gave us convenient, one-stop, location-based storage locations. Not relying on a traditional file server means the cloud storage of photos is open to anyone who isn't someone you've blocked on Facebook. This democratization of photo storage without a web server takes the onus off of the central web servers, and allows any number of tools to use any number of cloud storage locations. If your preference is PDF exporting, you can also print your images to PDF. Likewise, you can now e-mail a print-ready PDF with your finished product. Unfortunately, only the Export dialogue has an e-mail option; there's no option to include links, but that may come soon. Photos to PDF and e-mail are not widely used now. They are for those of us who are more interested in PDF durability. Also, images can be resized accordingly before going out to their destination. Otherwise, it's the same as the previous versions. Phew! That's a lot. I definitely didn't mean to imply that this review was all about fine-tuning the software, but it took longer than I anticipated to figure out ways to describe individual features. The Real-time Brush Control is one that I've used for years. Not being able to locate the brush control in the previous versions was a killer, and now I can't imagine not having it. Perhaps the best new feature is the ability to convert your RAW images to a DNG format — just a matter of selecting the option from your File menu. This is much more convenient than many of the other new features, which do not debut with Lightroom 5. As mentioned, the rest of the features (including the Real-time Brush Control) are basically the same as in previous versions.
