I have had the chance to try out various Photoshop versions; some before they were even released, yes my move to GIMP is starting to show in the embarrassing photos I now create, but that's another story for another time, anyway, let's move on. The version I am most familiar with is PS CS5 and now have just recently decided to make the big jump to 2020 and PS CC.

Since I started to work with Photoshop CS4, it has been one of the obvious first choices that I have in regards to the process of editing an image in the early days. For years I have been using Photoshop CS4 at home, any new computer that is in the house is always a Photoshop workstation, but in the past three years or so the main focus of my work is not only working on a proofing device, but then finishing the files for print as well. Hence, my transition to the latest version of Photoshop has been a comfortable one, like many others I have to rely on your mention of it. I am a photographer, and a bit of a novice when it comes to Photoshop. I just wanted to make a change to the main picture of my personal website. After trying to use Photoshop for the first time 5 years ago (I mainly used Photoshop Elements), I realised that I was actually scared of Photoshop and I didn't want to touch it again. It didn't help that when I went to college, the photo class were taught in Photoshop, and all the other students were doing their homework in Photoshop before hand. It also didn't help that I didn't like the work flow of Photoshop.

Of course, many people maintain their own Adobe Creative Cloud accounts, and have separate Creative Cloud apps for different roles. For example, someone might primarily work with both Adobe's stock photo management software, Lightroom, and desktop photo editing app, Adobe Photoshop Elements. In 2020, alongside the release of Photoshop for the web, the company is bringing these applications together in four new apps that replace Lightroom Classic CC, Lightroom CC, Photoshop Elements, and Photoshop CC. If you have Creative Cloud accounts, you'll now be able to explore file sharing, captions, and lessons in a unified spot. Photoshop and Creative Cloud are almost synonymous now. 2019's release of the Adobe Creative Cloud desktop apps creates a one-stop shop for photographers, illustrators, and others who need an advanced suite of tools and features. The company has created a set of new apps — Photoshop for Web, Photoshop Elements, Photoshop Mix, Adobe Illustrator, and Adobe Animate — that replace Photoshop Creative Cloud apps Lightroom Classic, Lightroom CC, Photoshop Elements, Photoshop Mix, and Photoshop Animate. The company started letting creatives download Photoshop, Lightroom, and Photoshop Elements all as one app called Photoshop on the web at the start of the year, so it makes sense that it's doing the same with now-deprecated Photoshop Creative Cloud apps, and that they're merging them into a new Photoshop Creative Cloud desktop app. For those on the Creative Cloud, there are four apps:
